Model and Research Evaluation

A source-transparent summary of the existing Random Forest evaluation evidence.

Generated 2026-10-20T20:17:05.643Z

Verified evaluation metrics

ACCURACY	MACRO F1	TEST RECORDS
100.00%	1.0000	3,686

Evaluation evidence

Measure	Verified value
Accuracy	100.00%
Macro F1	1.0000
Test records	3,686
Events evaluated	35
Independent validation	No
Label origin	Rule-derived labels

Model input features

stars, review_count, collected_review_count, mean_review_rating, rating_std

Research limitations and interpretation

This report is generated from the existing PlanoVision project data. Synthetic service options are simulation inputs, not verified real-world offers or availability. Vendor risk fields are research-derived and do not confirm reliability, booking status or collaboration. Model metrics use rule-derived labels and do not establish independent real-world validation. This academic administration workspace has no authentication or role-based access control.
